

Minutes of the December 20, 2013 Water Commissioners meeting.

Members present: Marcia Graham, Ray Peltier, and Mac McLachlin

Guests: Pete and Tommy from LRW

The main purpose of this meeting was to discuss the work that needs to be done in 2014.

Mittersill

Find the line that runs from the old pump houses to behind Bill Downey's property.

Find the lines that run in front of the Inn before the ramp. Pull out old secondary pipes. Begin work when the ground thaws and check with Lois to determine when the Inn has the fewest number of guests registered. Wait till Mac returns from vacation before beginning the work.

Find the 8 inch main and be sure that all secondary lines are attached to this main.

Replace the valves going into the Inn.

Find and fix all curb stops.

Check the storage tank. Clean it inside and out and seal it.

Franconia Village

Corrosion control is needed. A dehumidifier of the proper size has to be purchased and installed.

Perform leak detection throughout the town.

Separate the meter reading list into Mittersill and Franconia village.

Try to sell the old ductile pipe stored at the Magowan hill station.

Remove trees around the storage tank.
